

2022/06/22

- The presentation and demo took place today and the Northline Canada team really enjoyed the demo and was really interested in our work, as it aligned with the kind of research and development their company is focusing on. The demo was a resounding success.
- After a meeting with the supervisor, he was extremely pleased with my work and for the meantime, wants to begin working on creating a paper outlining what we've accomplished so far and our future plans. He said he will send me an email for the conference (**deadline is july 8th**), called the **ICMLA (IEEE International Conference on Machine Learning and Applications)**. He will send a draft of an example report to get me started.
- **Some things to talk about in the introduction:**
 - Talk about how there is a need for this kind of easily accessible and readily available testing development and simulation platform, current large manufacturers such as gm or toyota all have their own personal access to it so it's very closed off and contained, not readily available, this kind of bench can fill that gap and provide a bridge for these kinds of activities, blah blah. Discuss a brief overview of the work we've done and what the rest of the report is gonna talk about, as well as our future plans for this bench.
 - The rest of the report will literally go over what work we've done, everything from the connecting of the peripherals to the bench all the way to the end, basically outline my presentation I just did with our future goals and plans and sprinkle in all the other stuff that Dr. Azim mentioned.
- If Dr. Azim doesn't get back to me by tomorrow, I'll send him an email enquiring about the resources he mentioned.
